Art Unit: 3744

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 4-5 and 13-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification mentions using other system characteristics for determining when the expansion valve is full open for reasons other than low refrigerant, however the specification does not provide a single disclosed embodiment showing such a system nor describe neither how it is constructed nor how it would operate.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the means for indicating that the refrigerant amount is below the desired amount and the means for using other system characteristics for determining when the expansion valve is full open for reasons other than low refrigerant must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure

number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-12 and 15-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Bessler. Bessler discloses a low refrigerant detection means responsive to the full open position of the expansion valve sensed by a switch operated by the plunger member of the valve to provide an indication of low refrigerant and stop the compressor (see Figures 2-4).

Claims 1-8 and 11-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohkoshi. Ohkoshi discloses a low refrigerant detection means responsive to the full open position of the expansion valve PMV when other system characteristics such as

the ratio of the high side pressure to low side pressure indicate when the expansion valve is not full open for reasons other than low refrigerant to provide an indication of low refrigerant and stop the compressor (see 40, 128, 112, 114 of Figure 5 and col. 5, lines 31-68).
